

Release Notes

Update: v1.27.7

Web Browser

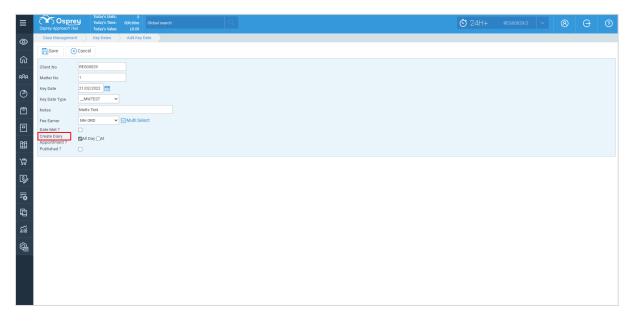

Contents

Key dates populating in Outlook	3
Associates – web-enabled documents	4
Aged debtors	5
Notification to requisitioner	6

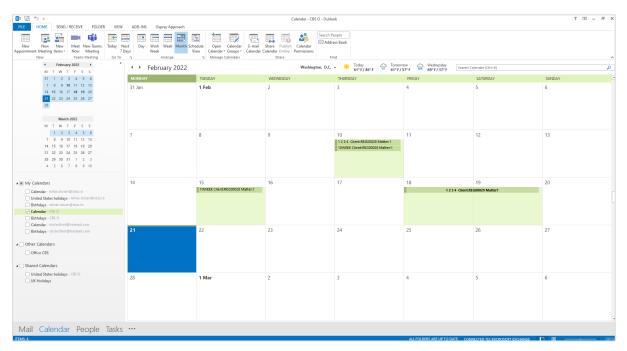

Key dates populating in Outlook

Previously, if users were to select "Create diary appointment", the key dates would not appear in their Outlook calendar.

In this update, this functionality works as expected, and key dates appear in Outlook.

Associates - web-enabled documents

Previously, when documents were web-enabled - for the client to view on the web portal - it would automatically web-enable them for the associate as well.

Aged debtors

Previously, when running the aged debtors report and using the "As at" filter, it was including future postings.

In this update, the "As at" filter no longer includes future postings.

Notification to requisitioner

Previously, if the "notify requisitioner" box was checked by default, but unticked before authorising and posting, the user was sent the notification anyway.
