Release Notes

Update: v3.1.2

Mobile Portal for iOS

Contents

Questionnaire CV notes

Previously, when accessing a questionnaire, any CV notes appeared as editable fields. If the CV note expands across the screen, it is moved onto the next line as a separate editable field.

In this update, CV notes appear as a one-line non-editable text field.
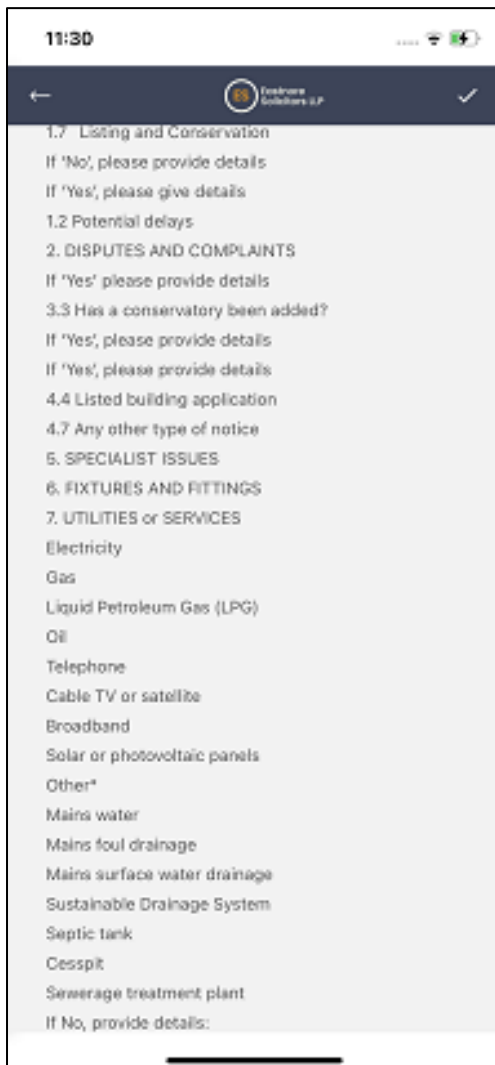

Questionnaires

Previously, some questionnaires would not appear in the same order as intended, with dropdown boxes showing right at the bottom of the questionnaire.

In this update, the app will display it in the order the questionnaire was created.

Text Fields Pre-populating

Previously, when viewing a questionnaire within the Portal app, if the field is blank or is a CV note, the text would be repeated in an editable field.

In this update, CV notes will appear as single line, non-editable fields.

Log out

Previously, if users were to logout without submitting a web questionnaire, you would be unable to fill in that questionnaire on next login.

In this update, the web questionnaire form can still be accessed upon logging in.
